ROBOTICS TEAM PROJECT!

ENGINEERING ROBOTICS TEAM COURSE

Begin to build your skills in real life engineering through Engineering Project Competition!

ENGE 050B Introduction to Robotics Team Project Construction introduces a student to real-life engineering. This course is oriented toward construction of an underwater autonomous vehicle being designed and built to compete in the international contest, Summer 2018!

Anyone with an interest in engineering can participate – team effort is a major component of this course. Hands on work in mechanics, waterproofing, electronics, programming, acoustics and other engineering areas are par for the course.

Classes fill fast! • Register early!

Spring | January 29 - May 26
